													Total # records	155,266,565

* The # providers are the number of providers for which EMR data was extracted for the indicated cycle (and "data up to" date. The number of recruited sentinels at that point in time can be significantly higher due to the time lag between the time of recruitment and the time of data extraction for them being made operational. Time lags can be due to time required to get ethics approval and/or develop EMR data extraction functionality.
